

SUSTAINABILITY REPORT

2025

Message from Senior Management

Dear Valued Stakeholders,

As the first hotel of the Barut Hotels Group, which has been serving as a pioneering brand in the tourism sector for over 50 years, Acanthus Cennet Barut Collection has consistently upheld its philosophy of “happy employees, happy guests” since its establishment and continues to do so with the same determination today. By valuing its employees, Barut Hotels has set an example for many businesses in the tourism sector and has contributed to the development of employee rights and working conditions through the opportunities and practices it offers.

Our Sustainability Report, which we publish regularly every year, is not only a document that presents our current performance, but also a concrete reflection of our long-term goals and corporate approach. The year 2025 has brought new responsibilities for businesses worldwide in areas such as increasing energy and water efficiency, combating the climate crisis, and promoting social sustainability. As Acanthus Cennet Barut Collection, we have continued to implement these responsibilities with determination by placing sustainable hospitality at the core of all our processes.

In our hotel, hot water is produced using energy generated from solar panels, thereby reducing the consumption of fossil fuels with high carbon emissions. Our 6.9 MW solar power plant, whose installation began in 2024, has been completed, and as part of greenhouse gas emission reduction efforts, 50% of the hotel's electricity consumption in 2025 was supplied by this plant. With this investment, a tangible contribution has been made to reducing carbon emissions, and the 2024 target has been successfully achieved.

In line with our 2030 targets, we aim to contribute to the United Nations Sustainable Development Goals, particularly Affordable and Clean Energy, Climate Action, and Decent Work and Economic Growth. By increasing our investments in energy efficiency and renewable energy, we aim to continuously reduce our carbon footprint. At the same time, by strengthening our employee-focused practices, we will continue our commitment to being a leading organization in the social dimension of sustainable development.

Sustainability at Acanthus Cennet Barut Collection

Barut Hotels has grown since its establishment by acting with the values of reliability, integrity, diligence, flexibility, and innovation, becoming a pioneering brand recognized in the industry for its sustainability efforts. Through our 2025 Sustainability Report, we transparently share our sustainability approach, strategies, goals, and our 2025 performance with all our stakeholders.

The safety and well-being of children is our priority. Our facility enforces a zero-tolerance policy against all forms of abuse and exploitation of children. If you encounter any suspicious situation, please report it to the relevant authorities by calling 112 or by contacting the police station at the provided address. We thank you for your support in protecting children.

We continue our development journey with determination to achieve our sustainability goals. In order to support our 2030 targets, we are implementing new environmental, social, and governance initiatives throughout 2025. The participation of our guests, employees, and visitors in water and energy conservation efforts across the hotel, as well as in initiatives aimed at reducing waste, is of great importance for contributing together to a more sustainable future.

Sustainability at Acanthus Cennet Barut Collection

In our sustainability journey, we adopt a balanced and responsible approach not only environmentally, but also socially and economically. We believe that achieving these goals is only possible through the cooperation and joint efforts of all our stakeholders. In this regard, we invite all our stakeholders—from our employees and suppliers to our guests and local communities—to embrace our sustainability vision and take an active role in implementing our commitments. Let us take steps together toward a more livable world, a more resilient society, and a more responsible future.

We structure our sustainability approach under four main pillars and determine our priority areas by considering our impacts across the value chain. These pillars are as follows:

1. Environmental Sustainability:

We develop innovative solutions to reduce our carbon footprint and increase our energy efficiency. To minimize our environmental impact, we turn to sustainable energy sources and optimize our waste management processes.

2. Social Responsibility and Community Impact:

We develop social benefit projects for our guests, employees, and the communities in which we operate. By supporting diversity, equity, and inclusion, we aim to create positive change in society.

3. Economic Sustainability and Operational Efficiency:

We maintain financial discipline and manage our working capital and investments effectively. By optimizing our business processes, we both reduce costs and deliver high-quality services to our guests.

4. Technology and Digitalization:

We continuously enhance the guest experience by utilizing digital technologies. Through technological innovation, we modernize our services and increase operational efficiency.

5. Biodiversity Conservation:

We regard the protection of natural life and ecosystems as an integral part of our sustainability approach. We support practices that contribute to the conservation of local biodiversity and aim to leave a healthier environment for future generations by using natural resources responsibly.

We shape our corporate strategy with this integrated approach and apply our sustainability principles at every stage. By supporting our 2030 targets with short- and medium-term goals, we measure our non-financial performance more effectively. In line with global trends, we aim to maximize our contribution to the Sustainable Development Goals.

Through this strategic coherence, we continue to add value both to our guests and to our environment, and we steadily take the necessary steps toward a sustainable future.

Barut Hotels Policy

As Barut Hotels, our fundamental principle is to comply with national and international legal requirements and standards in all our product and service processes, and to continuously improve our operations. Our main goal is to offer top-level, guest-oriented service at our hotels and provide a unique service experience.

Employee Safety and Investment in People

Employee satisfaction and well-being are of great importance to our hotels. Therefore, continuous improvements are made in processes to minimize all risks that may threaten the health and safety of employees and business partners. Training of employees, protection of human rights, and ensuring equal rights for everyone without any discrimination form the foundation of our company policy.

Guest Satisfaction and Safety

Since 1971, Barut Hotels has adopted high guest satisfaction as its top priority and has been continuously improving as a hotel chain. All kinds of suggestions, complaints, and feedback from guests are carefully evaluated, and the resolution process is carried out transparently. Every piece of feedback is considered an opportunity for improvement and contributes to enhancing service quality.

Environmental Responsibility and Sustainability

We act with a responsible tourism approach to reduce our negative impact on the environment and protect natural resources. Reducing the carbon footprint, minimizing and recycling waste, and protecting nature through eco-friendly methods are among our key sustainability goals. Promoting and preserving cultural heritage, cooperating with local communities, and combating climate change are integral parts of these goals.

Energy Management, Savings, and Efficiency

Increasing energy efficiency is a necessity of our sustainable service approach. In this regard, efficient energy use is targeted across all services, products, and supply chains, and green energy solutions are preferred. Thanks to technological infrastructure, energy consumption is monitored, and both savings and efficiency are achieved.

Water Efficiency

We place great importance on the sustainability of water resources. The amount of water used in our hotels is carefully monitored, systems that prevent unnecessary use of water are implemented, and technological solutions that improve efficiency are put into operation. Water-saving equipment and practices are utilized to minimize water consumption.

Food Safety and Hygiene

Food safety is one of the core principles of our service policy. At all our hotels, international safety and hygiene standards are strictly applied at every stage of the food chain. These standards are communicated to all employees and stakeholders to ensure the highest level of hygiene is maintained through a culture of continuous improvement.

Investors and Business Partners

Barut Hotels prioritizes working with business partners who share similar values and vision. All business relationships are governed by principles of legal compliance, fairness, equality, and efficiency. During partnership processes, the needs of all parties are considered, and mutual satisfaction and benefit are adopted as fundamental goals.

Support for the Local Economy and Sustainable Procurement Practices

Our hotels are committed to contributing to the local economies of the regions in which they operate. Accordingly, preference is given to purchasing products and services from local suppliers, and local employment is encouraged. Sustainable procurement processes prioritize environmentally friendly products that consume less energy and water and produce less waste.

Child Protection

We consider the protection of children a social responsibility. Ensuring child welfare, protecting them from all forms of abuse and harmful influence, and taking preventive measures, as well as cooperating with organizations working in this field, are among our corporate priorities.

Information and Data Security

Information and data security are integral parts of Barut Hotels' corporate responsibility. The confidentiality, integrity, and accessibility of all information assets are protected, and measures are taken against unauthorized access. Risks related to data security are regularly analyzed, and necessary protection measures are implemented.

Accessibility

We continuously improve physical, digital, and communicative accessibility conditions so that all guests can benefit from our services equally. Accessible rooms, ramps, guidance systems, and service content are provided in line with the needs of individuals with disabilities, ensuring their comfort and independence.

Local Awareness

Barut Hotels respects the cultural values and traditions of the regions in which it operates. To promote and preserve local culture, guests are encouraged to engage with local crafts, culinary traditions, and ways of life. In doing so, interaction with local communities is fostered, and the sustainability of cultural heritage is supported.

OUR HISTORY

Barut Hotels launched its environmental awareness initiative in 2019 under the name **We Care**. During the pandemic period, in line with evolving needs and expectations, the initiative was renamed **We Care All** in 2021. This movement highlights sustainable practices across a wide range of areas, including education and employee rights; environmental activities and the preservation of cultural heritage; waste reduction and recycling; support for agriculture; local sourcing and procurement; renewable energy investments; local employment; and participation in sports activities.

Since its establishment in 1971, Barut Hotels has embraced a mission to protect and nurture a love for nature and people. Through the **We Care All** initiative, the Group aims to fulfill its responsibilities toward future generations by implementing sustainable practices today. Within this framework, Barut Hotels plays an active role in conserving natural resources, supporting the local economy, and strengthening communities.

By placing sustainability principles at the core of its values, Barut Hotels is taking a determined step toward minimizing both its environmental and social impacts.

CORPORATE RISK MANAGEMENT

Today, societies, the business world, and indirectly individuals are confronted with numerous global risks. These risks must be carefully assessed and effectively managed in the short, medium, and long term. This approach enables companies to differentiate themselves and create new opportunities. The first decade after 2020 is defined as a period marked by some of the greatest disruptions in human history. During this time, the business world has faced a wide range of challenges, with ongoing adaptation processes spanning from natural resource crises and climate change to supply chain disruptions and international crises.

As Barut Hotels, we draw attention to these global risks and adopt a proactive approach against the impacts of climate change by increasing the sustainability and environmentally friendly practices across our facilities. In addition, we develop strategies to secure our supply chain and enhance resilience against potential crises. In this way, we aim to both deliver the highest quality service to our guests and fulfill our social and environmental responsibilities.

Barut Hotels implements a comprehensive corporate risk management approach to effectively address potential risks. The risk management system ensures the identification and assessment of risks and opportunities, the development of risk strategies, and their regular review and updating when necessary.

We consider the United Nations Sustainable Development Goals, which were developed to find collective solutions to major global challenges, as a key component of our sustainability strategy.

The goals to which we contribute are disclosed in our Sustainability Reports.

The Sustainable Development Goals we support are Goals **03, 04, 05, 07, 10, 13, 14, 15, and 16**.

GREEN ENERGY

Thanks to our 6.9 MW solar power plant, the installation of which was completed in Dinar, Afyon, we supplied 50% of our electricity consumption from renewable energy in 2025, making a significant contribution to the reduction of our carbon emissions.

SOLAR ENERGY

By generating hot water through 150 solar panels, we have reduced LNG consumption and contributed to lowering our carbon emissions by increasing energy efficiency.

ENERGY EFFICIENCY

- With the switch system installed on room balcony doors, the air conditioning automatically switches off when the balcony door is opened.
- Motion-sensor LED lighting is used throughout all common areas.
- Lighting in room corridors and outdoor areas operates via a timer system.
- Air conditioning, pool plant rooms, boiler rooms, booster pump rooms, and heating-cooling systems can be programmed through automation systems.
- Energy savings are achieved by using thermal comfort glazing on all exterior façades of the facility.
- Fuel consumption is kept under control through generator synchronization.
- Frequency-controlled drives are used in ventilation systems and booster pumps throughout the hotel.
- Electrical energy consumption can be monitored on a regional basis using energy analyzers.
- Through the Building Automation System used at the facility, applications such as lighting, ventilation, and air conditioning can be monitored and controlled centrally via computer.

*Building Automation System

WATER SYSTEMS and WATER CONSERVATION

- Sensor-operated fixtures are used in all common areas.
- All washbasins are equipped with aerator systems, and their flow rates are monitored.
- Water consumption is kept under control through balancing systems and flow limiters.
- We aim to reduce water consumption by encouraging the use of 3-liter water-saving flush buttons installed in toilet cisterns.
- Information is provided to guests regarding water consumption related to towel usage.
- The use of reusable water bottles is encouraged in order to reduce plastic bottle consumption and conserve natural spring water resources.
- A drip irrigation system is used for garden irrigation.

POOL HEATING

For pool heating, we use energy generated from renewable sources through heat pump systems instead of consuming LNG with high carbon dioxide equivalent emissions.

AUTOMATION SYSTEM

Through the use of analyzers, we can measure electricity consumption on a regional basis via the automation system and take corrective actions when necessary.

PLANT SELECTION

By landscaping an area of 1,000 m² with *Zoysia* grass, lower levels of irrigation, fertilization, and pesticide use were required compared to other grass varieties.

NATURE & ARKEOLOJİ

In all guest rooms, we raise awareness about energy conservation while introducing the region's natural formations and archaeological heritage.

- [Environmental Brochure_TR_RU.pdf](#)
- [Environmental Brochure_EN_DE.pdf](#)

CULTURAL HERITAGE

By continuing our sponsorship support for the archaeological excavation works carried out at the Ancient City of Side, we contribute to the preservation of cultural heritage and its transmission to future generations. This support forms part of our social and cultural sustainability approach, which is based on safeguarding and sustaining local values.

WASTE REDUCTION

By replacing single-use information cards with reusable wooden information cards, we reduced resource consumption and waste generation.

PREVENTION of FOOD WASTE

By replacing the fresh fruit offerings provided in guest rooms with dried fruit offerings that have a longer shelf life, we reduced food waste. This practice supports the reduction of waste generation, the efficient use of resources, and our environmental sustainability goals.

RECYCLING

We sent our unused textile products to textile factories for recycling. This practice has contributed to reducing waste, supporting the circular economy approach, and conserving natural resources.

EMPLOYEES

- Employees receive benefits such as birthday gifts, stationery vouchers, scholarships, etc.
- In 2025, 221 employees received supplementary health insurance support.
- We have earned the right to receive the Occupational Health and Safety Management System Certificate.
- Employees can submit their feedback using the Band Up app.

SUPPORT FOR WOMEN PRODUCERS

Lavender collected by female producers is offered to guests in our rooms.

ENVIROMENTAL AWARDS

In 2025, we obtained the **Energy Management System Certificate** by fulfilling all required criteria.

By meeting the Blue Flag criteria, we were awarded the **Blue Flag** in 2023.

By meeting the requirements of the **ISO 14001:2015 Environmental Management System**, we were entitled to obtain the certification.

ENVIRONMENTAL CERTIFICATES

We renewed our Zero Waste Certificate in 2025.

ENVIRONMENTAL AWARDS

In 2025, we documented our sustainable tourism practices in the areas of environmental and social responsibility at an international level by receiving the Travelife Award.

ENVIRONMENTAL CERTIFICATES

In 2025, we earned the Sustainable Tourism Certificate as a testament to our commitment to sustainable tourism principles.

ELECTRICITY CONSUMPTION

2024

Plastic
37343 kg

Paper-Cardboard
51744 kg

Metal
2361 kg

Glass
225282 kg

Other Waste
351640 kg

The concept of Waste Management encompasses activities such as preventing waste generation, reducing waste at source, reusing waste, sorting waste according to its characteristics and type, collecting waste, temporarily storing waste, transporting waste, recycling waste, recovering waste (including energy recovery), disposing of waste, monitoring, controlling, and auditing post-disposal processes.

2025

Plastic
38996 kg

Paper-Cardboard
49688 kg

Metal
1798 kg

Glass
187459 kg

Other Waste
326437 kg

We implement a waste management model within the framework of our “Zero Waste” certificate. We raise awareness among our employees, particularly regarding the separate collection of waste, through regular training sessions.

We carry out Waste Management with the support of our guests through Waste Stations located throughout our facility.

RECYCLING OF WASTE OILS

- Throughout 2024, we reduced our environmental impact by recycling 3,930 kg of waste oil through licensed companies.
- Throughout 2025, we reduced our environmental impact by recycling 4,470 kg of waste oil through licensed companies.

WATER CONSERVATION AND WASTE REDUCTION

- By promoting the use of water fountains, we are reducing the amount of single-use plastic waste and contributing to the conservation of natural resources.

REDUCTION OF WASTE

By switching to larger packaging for shampoo, shower gel, soap, and body lotion, we have reduced packaging-related waste and lowered our environmental impact.

BLUE CAP

We collect blue lids and deliver them to the Manavgat Association for the Disabled (MEDER) to purchase wheelchairs.

BREAST CANCER AWARENESS EDUCATION

To support the health and social awareness of our employees, we organized breast cancer awareness training for our hotel staff. With this training, we aimed to highlight the importance of early diagnosis and contribute to the quality of life of our employees as part of our sustainable human resources approach.

ALI İHSAN BARUT SCHOOL ENVIROMENTAL EDUCATION

Our hotel's Environmental Education program, organized for kindergarten and second-grade students, aimed to instill in children a love of nature, an awareness of environmental protection, and sustainable living habits. Through this education, we supported the development of environmental awareness at an early age, contributing to a responsible approach to tourism for future generations.

CHILD NEGLECT and ABUSE TRAINING

With the training organized for our employees on child neglect and abuse, awareness has been increased regarding the protection of children's safety and well-being. This training has become an important part of our social sustainability responsibility, in line with our approach to creating a safe service environment that respects human rights.

TREE PLANTING

The General Directorate of Forestry, in collaboration with the Tema Foundation, organized a tree planting event for students of the 75th Year Republic Primary School as part of National Tree Planting Day.

SUBSTANCE ABUSE EDUCATION

The substance abuse training organized for our employees aims to raise awareness about healthy living, prevent risky behaviors, and support a safe working environment.

MARINE LITTERWATCH

To provide data support for the Marine Litter Watch Program, a cleanup was conducted on the beach with defined start and end coordinates, and the waste was sorted by type.

Waste items have been counted and recorded in the Marine LitterWatch list according to their categories. Data sharing has been facilitated with T r ev.

COASTAL CLEANUP

By participating in the coastal cleanup event organized as part of World Cleanup Day, we contributed to the protection of marine and coastal ecosystems. This event aimed to prevent waste at its source and raise environmental awareness, supporting our environmental sustainability approach to protecting natural areas.

PROTECTION of SEA TURTLES

By taking measures to protect the habitats of sea turtles around our facility, we supported the safety of the species during their breeding season. Through these efforts, we contributed to the continuity of natural ecosystems in line with our environmental sustainability approach, which prioritizes the conservation of biological diversity.

CARBON FOOTPRINT TRAINING

Through carbon footprint training provided to our employees, awareness has been raised regarding the impact of energy, water, and resource use on climate change; individual and corporate responsibilities for reducing emissions have been emphasized.

SOCIAL RESPONSIBILITY

By meeting the daily food needs of Dr. Hüseyin Vural Special Education Elementary School, we contributed to social solidarity in line with our social responsibility approach towards disadvantaged groups. This support was provided as part of our approach to social sustainability and strengthening local communities.

TREE DONATION

We donated saplings to the TEMA Foundation on behalf of our guests who have stayed at our hotel for 30 years.

LOCAL DELICACIES

ACANTHUS CENNET BARUT COLLECTION

Güneşin Altın Lezzeti Manavgat Tahini:

Rivayet edir ki, Toros Dağları'nın eteklerinde yetişen susam, bu bölgenin bereketli topraklarında bir başka güzel olmuştur. Yürekler, göç yollarında elde ettikleri susamı taşı değirmenlerde ezerek ilk tahini yapmışlar. İşte o günlerden bugüne, Manavgat tahini, yalızca bir lezzet değil, bölgenin tarihini anlatan bir miras olmuştur. Manavgat tahininin sırtı, susamın ezilme seçili taşı değirmeninde yavaşça döndürülmesinde saklıdır. Bu yöntem, tahine kalitesini bir dokunuş ve zengin bir aroma kazandırır. Ancak onu eşsiz yapan bir başka unsur da, susam önce güneşle kurularak sonra değir zenerinde öğütülmüştür. Manavgat tahini, bu yüzden sadece bir yemek malzemesi değil, soğuk güneşin ve doğanın yoğunluğunu sofralara taşıyan bir hazinedir. Bölge halkı, tahini genellikle peynirle karıştırarak sabah kahvaltılarında tüketir. Bu karışım, yediklerin uzun yaya yollarında enerjilerini korumalarını sağlar.

The Golden Flavor of the Sun Manavgat Tahini:

Rumor has it that sesame, which grows on the foothills of the Taurus Mountains, used to be another beauty in the fertile soil of this region. Nomads made the first tahini by crushing the sesame seeds they obtained on their migration routes in stone mills. Since those days, Manavgat tahini has become not only a flavor but also a heritage that tells the history of the region. The secret of Manavgat tahini lies in the careful selection of sesame seeds and their slow grinding in stone mills. This method gives tahini a velvety touch and a rich aroma. But another element that makes it unique is that the sesame seeds are first roasted in the sun and then ground using natural methods. Manavgat tahini is therefore not just a food ingredient, but a treasure that brings the intensity of the sun and nature to the table. The people of the region usually mix tahini with molasses and consume it for breakfast. This mixture used to keep the nomads energized on their long highland journeys.

ACANTHUS CENNET BARUT COLLECTION

Toroslardan Gelen Lezzet Hikâyesi Antalya Piyazı:

Antalya piyaz, diğer piyazlardan farklı olarak bir yan yemek değil, başlı başına doyurucu bir ana yemek gibidir. Tahini, limon suyunun, sarımsağın ve zencefilin birleşiminden oluşan bir eşsiz sos, haşlanmış kuru fasulyenin üzerine döküldüğünde ortaya çıkan lezzet, damaklarda unutulmaz bir tat bırakır. Üzerine serpiştirilen haşlanmış yumurta dilimleri, taze maydanoz ve ince kıyılmış soğan, piyaza hem renk hem de zenginlik katar. Yanna taze sıkılmış portakal suyu ya da ayranla harika bir uyum yakalar.

Bu lezzet, Antalya'nın tarihine ve coğrafyasına sıkı sıkıya bağlıdır. Tahinin, Toroslarda eteklerinde yetişen susamdan ekile ekilmesi; fasulyenin yöresel verimli topraklardan gelmesi; bu yemeği yalnızca bir tarif olmaktan çıkıp bir kökür mirasına dönüştürür.

A Flavor Story from the Taurus Mountains Antalya Piyazı:

Unlike other piyaz, Antalya piyaz is not a side dish but a hearty main course in itself. This unique sauce, which is a combination of tahini, lemon juice, garlic and vinegar, leaves an unforgettable taste on the palate when poured over boiled beans. The boiled egg slices, fresh parsley and finely chopped onions sprinkled on top add color and richness to the dish. Freshly squeezed orange juice or ayran is a perfect accompaniment.

This flavor is closely tied to the history and geography of Antalya. The fact that tahini is obtained from sesame seeds grown in the foothills of the Taurus Mountains and the beans come from the fertile soils of the region transforms this dish from a mere recipe into a cultural heritage.

BROCHURE CONSUMPTION

The use of large-sized packaging for soap, shower gel, shampoo, and hair conditioner products has reduced the consumption of single-use packaging materials.

ELECTRIC VEHICLES

The electric vehicles and electric vehicle charging stations at our facility aim to reduce fossil fuel consumption and lower carbon emissions. This initiative supports low-carbon transportation, promotes the use of environmentally friendly technologies, and strengthens our commitment to sustainable tourism.

OUR ROADMAP FOR A SUSTAINABLE FUTURE

- To reduce greenhouse gas emissions associated with electricity consumption by sourcing our electricity from renewable energy. — 2027**
- Continuing to provide training for our employees on environmental awareness, energy conservation, and sustainability in order to increase their environmental consciousness. — 2026**
- Continuing to protect sea turtle nesting sites as part of our biodiversity conservation efforts. — 2026**
- Supporting biodiversity by contributing through tree sapling donations. — 2026**
- Making donations to authorized organizations to support biodiversity conservation activities. — 2026**
- Increasing xeriscaping areas to reduce water consumption in garden and landscape areas. — 2028**
- Continuing to reduce greenhouse gas emissions from LNG by actively using 150 solar panels for water heating. — 2026**

SUSTAINABILITY REPORT CONTENT

This report has been prepared to transparently present to stakeholders the environmental and social initiatives carried out by the organization, in line with the principle of transparency. The report includes statistical data on consumption realized during the years 2024 and 2025.

In addition to the environmental and social initiatives, the report also highlights good practices implemented during this period. The Sustainability Report aims to contribute to the Sustainable Development Goals, reduce environmental impacts, and enhance social benefits.

On our sustainability journey, we adopt a balanced and responsible approach not only environmentally, but also socially and economically. We believe that achieving these goals is only possible through the collaboration and collective efforts of all our stakeholders. In this regard, we invite all our stakeholders from our employees to our suppliers, from our guests to local communities to embrace our sustainability vision and to take an active role in implementing our commitments. Let us take a step together toward a more livable world, a more resilient society, and a more responsible future.
